

SecurOS® POS

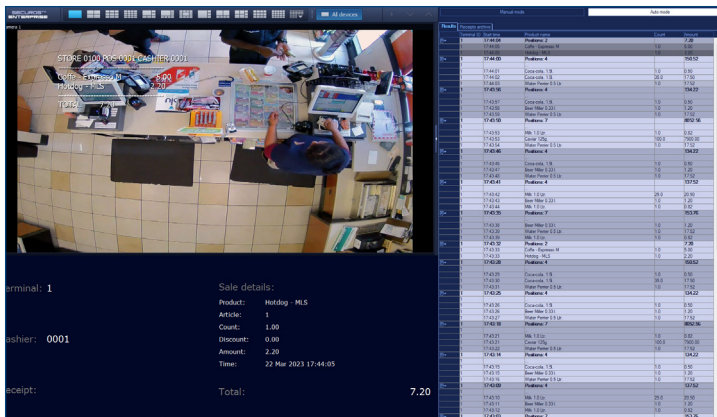

Point-of-Sale and ATM Transaction Monitoring

Technology Overview

SecurOS® POS (Point-of-Sale) is an intelligent software module for the SecurOS® video intelligence platform, which links live video with transaction data from a POS or ATM system. The module allows for the search of specific transactions and review of the exact video archive of that transaction to better identify instances of fraud or other nefarious acts.

SecurOS® POS provides full video evidence on selected transaction IDs, item numbers, terminal numbers, employees, customers, payment details, or stores in any combination required for thorough investigations.

Key Features

SECUROS® NATIVE MODULE

Works with other SecurOS® modules to provide a complete solution for recognition of known shoplifters and license plate recognition at gas stations, financial institutions, etc.

ADVANCED MANAGEMENT CAPABILITIES

Access data either locally or remotely, with automatic file transfer to central server location for long-term storage. Customize access to data retrieval based on individual users and/or groups.

CUSTOMIZED SEARCH

Search based on a variety of criteria, such as date/time, employee number, terminal number, item numbers, customer transaction amount, payment type, credit card, merchandise returns, voided transactions, and more.

SYSTEM AUTOMATION

Advanced event management capabilities that include time schedule engine, adjustable thresholds, and alarm capabilities that engage the automatic notification system (phone, email, SMS, etc.).

HARDWARE-AGNOSTIC

No specialized cameras or other hardware is required to leverage full functionality of the system.

SecurOS® POS and ATM Transaction Monitoring at Work

► In retail

Track daily POS transactions, total sales, revenue numbers, and more.

► In financial institutions

Tie ATM transactions to SecurOS® FaceX to identify watchlist individuals and flag for investigations.

► In franchise locations

Automate all local transactions into a central repository in real-time.

► In warehouses

Tie the solution into inventory warehouse for real-time order forecasting.

► In gas stations

Tie POS transactions to pump areas and integrate the SecurOS® Auto LPR.

Specifications

ISS Platform Support

Operating System Windows 10/11 Pro
Windows Server 2016/2019/2022

SecurOS® Edition SecurOS® Professional
SecurOS® Premium
SecurOS® Enterprise

Supported Video Formats

Codec MJPEG
MPEG4
H.264
H.265
MxPEG

Additional Technical Data

Terminal connection type RS-232, TCP/IP, UDP

Software integration capabilities RESTful Web Service
Microsoft ODB

System output Camera name / ID
Date / time
Employee number / name
Discount amount
Discount card
Terminal number
Item numbers (SKUs)
Customer transaction amount
Payment type
Receipt number
Barcode
Merchandise returns
Voided transactions
